

✓ J

ASTRONOMY

AND

ASTRO-PHYSICS.

THE SIDEREAL MESSENGER
NAME OF THE FIRST TEN VOLUMES.

VOL. XI.

1892.

EDITORS:

W. W. PAYNE,
GENERAL ASTRONOMY.

GEORGE E. HALE,
ASTRO-PHYSICS.

NORTHFIELD, MINN.:
GOODSELL OBSERVATORY
1892.

CONTENTS BY NUMBERS.

JANUARY.

General Astronomy: The transmission of radiant energy through gaseous media. Severinus J. Corrigan.....	1
Brorsen's short period comet. George A. Hill.....	7
The spectra of stars with large proper motion. J. E. Gore.....	11
Capture of comets by planets. H. A. Newton.....	12
Astro-Physics: The Astro-Physical Journal. George E. Hale.....	17
Distribution of energy in stellar spectra. E. C. Pickering.....	22
Spectrum of β Lyræ. E. C. Pickering.....	25
Stars having peculiar spectra. M. Fleming.....	27
The modern spectroscope. Joseph Sweetman Ames.....	28
Photographic methods of determining star transits. (Illustrated.) Frank H. Bigelow.....	42
On the absorption of heat in the solar atmosphere. W. E. Wilson.....	46
The ultra-violet spectrum of the solar prominences. George E. Hale.....	50
Note on the chromosphere spectrum. C. A. Young.....	59
New researches on the solar atmosphere. M. H. Deslandres.....	60
The enormous velocity of a solar prominence, observed June 17, 1891. Julius Fényi.....	63
Notes on some recent solar disturbances. Walter Sidgreaves and H. H. Turner.....	66
Recent results in solar prominence photography. George E. Hale.....	70
Astro-Physical Notes: Solar work at the Lick Observatory.—Mrs. Henry Draper's reception to the National Academy of Sciences.—Prof. Young's new universal spectroscope.—Spectroscopic work at the Paris Observatory.—Investigation of stellar motions at Potsdam.—A novel stellar spectroscope.—Spectroscopy at the Nice Observatory. Recent observations by Dr. and Mrs. Huggins.—Do solar lines vary in intensity?.....	78, 79
Current Celestial Phenomena: Plan of work for 1892.—Planet notes for February.—Planet tables.—Configuration of Jupiter's satellites.—Phenomena of the same.—Approximate times when the great red spot passes the central meridian of Jupiter.—Mr. Marth's ephemerides of the satellites of Saturn.—Minima of variable stars of the Algol type.—Occultations visible at Washington.—Comet notes.—Search ephemeris for Comet Brooks, 1886 IV.—Ephemeris of Tempel-Swift's periodic comet.—Ephemeris of Wolf's periodic comet 1891.—Ephemeris of Winnecke's periodic comet.—Wendell's orbit of Comet c 1891 (Barnard, Oct. 2).—New minor planet 321.—Observing auroræ.—Double shadow of Jupiter's Satellite I.—Companion to the Observatory.....	80-87
News and Notes: New name for this publication.—Department of Astro-Physics.—The new Naval Observatory.—Sirian and solar stars, by W. H. S. Monck.—The Lick Observatory and its work.—Note on the measurement of solar prominences by Dr. Henry Crew of Lick Observatory.—Lunar eclipse of Nov. 15, 1891, observed by J. B. C. at the Observatory of Boston University.—Observations of the partial eclipse of the Moon, Nov. 15, 1881, by E. E. Barnard.—Disappearance of new red spot on Jupiter, by E. E. Barnard.—Peculiar appearance of Jupiter's satellite IV.—Dark transits of satellite III.—Diameters of Sun and Venus.—Solar parallax.—Dark structures in the Milky Way.—The great 40-inch telescope soon to be made by Alvan Clark & Sons.—Notice of Worcester's new comprehensive dictionary.—Publisher's notices.....	88-96

FEBRUARY.

General Astronomy: Are the comets, or any portion of them, ever repelled by the Sun? George W. Coakley. (Illustrated).....	97
The effect of pressure upon the transmission of radiant energy through gaseous media. S. J. Corrigan. (Illustrated).....	108

Transparency of the crape ring, and other peculiarities as shown by the observations of the eclipse of Iapetus on Nov. 1st, 1889. E. E. Barnard. (Illustrated).....	119
Astro-Physics: Fall of a solar prominence into the opening of a spot. M. E. L. Trouvelot.....	124
Remarks on the influence of the aberration of light on spectroscopic observations of solar prominences. M. Fizeau.....	126
On aberration. M. Mascart.....	128
The large Sun-spot group of Aug. 28-Oct. 4, 1891. Rev. A. L. Cortie. (Illustrated).....	130
On the distribution in latitude of the solar phenomena observed at the Royal observatory of the Roman College, during first half of 1891. M. P. Tacchini.....	134
Notes on the use of the spectroscope for sketching solar phenomena, and for observing the spectra of the spots and prominences. Walter Sidgreaves.....	136
The star spectroscope of the Lick Observatory. James E. Keeler. (Two plates).....	140
Stars of the first and second types of spectrum. E. M. Maunder.....	145
The iron spectrum as a comparison spectrum in spectroscopic determinations of stellar motion in line of sight. H. C. Vogel.....	151
Researches on the radial motion of stars with the siderostat of the Paris Observatory. M. H. Deslandres.....	157
Notes on recent solar investigations. George E. Hale.....	159
Astro-Physical Notes: Effect of aberration on measures of solar prominences.—Photographs of the recent total eclipse of the Moon.—Herr Schumann's discoveries in the ultra-violet hydrogen spectrum.—The chromosphere line Angström 6676.9—Observations of Sun-spot spectra.—Book notice, part XII, old and new astronomy.....	159-163
Current Celestial Phenomena: Planet notes and tables.—Minima of variable stars of the Algol type.—Mr. Marth's ephemeris of the satellites of Saturn.—Phases and aspects of the Moon.—Occultations visible at Washington.—List of binary stars and test-objects for small telescopes for February and March.—Occultations of stars by the planets.—Two minor planets discovered by photography.—New minor planet No. 324.—Brilliant meteors.—Spanish nautical almanac.—Comet Notes.—Tempel-Swift periodic comet.—Search ephemeris for comet Brooks, 1886 IV.—Next apparition of Wolf's comet.—Ephemeris of Winnecke's comet. Ephemeris of comet 1891, (Wolf's periodic comet).—Comets and meteors by W. H. S. Monck.—A Clark 3-inch telescope for sale.....	163-171
News and Notes: Light curve of the eclipse of Iapetus.—Delicate refractometer by Mr. Brashear.—Neue Annalen der K. Sternwarte in Bogenhausen bei Muenchen.—Death of Sir George B. Airy, also that of Professor J. C. Adams.—A remarkable aurora.—Measures of the faint double star (H 2948) between β^1 and β^2 Capricorni by Mr. Burnham.—Measures of planetary nebulae by Mr. Burnham.—Aurora observations.—Variation of Latitude.—Periodic and secular variation of the latitude.—Publisher's notices.—Advertisements.....	172-176
MARCH.	
General Astronomy: Tidal theory of the forms of comets. George W. Coakley. (Illustrated).....	177
Observations of Jupiter made with the 16-inch equatorial of Goodsell Observatory. (Illustrated, Plate VII.) H. C. Wilson.....	189
Observation of spots and markings of the planet Jupiter. G. W. Hough, 193	
Discovery of nebulae. Lewis Swift.....	197
Astro-Physics: The objective prism. (Illustrated, Plate VIII).....	199
On the spectroscopic method of determining the velocity of stars in the line of sight. (Illustrated.) H. C. Vogel.....	203
Note on the Stonyhurst drawings of the solar spots and faculae. Rev. Walter Sidgreaves.....	212
Resumé of solar observations made at the Royal Observatory of the Roman College during the fourth quarter of 1892. M. P. Tacchini.....	214
On the influence of pressure on the spectra of flames. (Illustrated.) G. D. Livinge and J. Dewar.....	215

On the physical characteristics of the lines in the spark spectra of the elements. N. W. Hartley.....	223
The new star in Auriga. (Illustrated, Plate IX.) E. C. Pickering.....	228
On the visible spectrum of the new star in Auriga. (Illustrated). Henry Crew.....	231
Astro-Physical Notes: A new star in Auriga, Notes by Ralph Copeland, Dr. Huggins and E. S. Holden.—Progress of solar photography at the Kenwood Observatory.—Group of stars of the fifth type in Cepheus.—Nebulosity about the Wolf-Rayet stars.—Photographic halation and its remedy.—Herr Schumann's New spectrograph.—The aurora of Feb. 13, 1892.—The auroras of January, 1892.—The eruptive prominence of July 9, 1891.—The spectra of Sun-spots and the photosphere.....	233-243
Current Celestial Phenomena: Planet notes for April.—Planet tables.—Phases and aspects of the Moon.—Ephemerides of the satellites of Saturn.—Occultations of the stars by the Planets. Occultations visible at Washington.—Minima of the variable stars of the Algol type.—A total eclipse of the Sun, April 26.—Two new nebulae.—A great Sun-spot.—The new star in Auriga.—Aurora of Feb. 13, 1892.—Tempel's short periodic comet (1867 II).—Search ephemeris for comet (1867 II).—Search ephemeris for comet Brooks 1886 IV.—Ephemeris of comet e 1891 (Barnard Oct. 2).....	243-252
News and Notes: Sir George B. Airy.—An improvised chronograph.—The proper motions of stars.—Manning M. Knapp.—Personal explanation.—Queries for brief answers.—Publications by government astronomer, H. C. Russell.—Camden Astronomical Society.—Meeting of the Astronomical Society of the Pacific.....	252-256

APRIL.

General Astronomy: A simple mounting for a large telescope in the field during eclipse observations. (Illustrated.) Frank H. Bigelow.....	257
Note on the new binary. S. W. Burnham.....	268
History of the color of Sirius. T. J. J. See, Berlin.....	269
A further note on comets and meteors. W. H. S. Monck, Dublin.....	274
Sophie Kowalawski. Charlotte C. Barnhum.....	281
Historical note relating to the search for the planet Neptune in England in 1845-6. (Plate X.) Edward S. Holden.....	287
Astro-Physics: Observations of the new star in Auriga. Professor C. A. Young and Taylor Reed.....	289
The temporary star in Auriga. G. Rayet.....	291
The new spectroscope of Halsted Observatory. (Plate IX.) Professor C. A. Young.....	292
The limit of visibility of the different rays of the spectrum. (Illustrated.) Capt. W. de W. Abney.....	296
The astronomical exhibit at the World's Columbian Exposition.....	305
A new photographic photometer for determining star magnitudes. W. E. Wilson.....	307
Note on the spectrum of the large Sun-spot group of February, 1892. (Plate XII.) Henry Crew.....	308
Spectroscopic observations of the great Sun-spot group of February, 1892. (Plate XIII.) George E. Hale.....	310
New researches on the solar atmosphere. H. Deslandres.....	314
The Sun-spots, the magnetic storm and the aurora.....	316
Magnetic perturbations of February 13 and 14, 1892. M. Moureaux.....	318
The reductions of spectroscopic observations of motions in the line of sight. W. W. Campbell.....	319
On the spectra of binary stars. W. H. S. Monck.....	326
Spectra of stars in the Milky Way. J. E. Gore.....	326
Astro-Physical Notes: The new star in Auriga.—A change in the spectrum of Nova Auriga.—Magnetic perturbations of the great Sun-spot. A magnetic disturbance.—Great magnetic disturbance, Feb. 13-14, 1892.—The magnetic storm, Feb. 13-14.—M. J. Janssen's Note on Sun-spot as seen at the Meudon Observatory.—Photography of the great Sun spot at the Lick Observatory.—Area and position of the great Sun-spot as determined at Greenwich.—An equatorial group of Sun-spots.—Observations of eruptive prominences by E. E. Read, Jr.—Comparative photographic spectra of the Sun and metals by F. McClean.—Appointment of Sir Robert Ball as successor to Prof. Adams at Cambridge.—Recent publications, 328-337	

Current Celestial Phenomena: Planet notes and tables for May.—Ephemeris of Saturn's Satellites.—Minima of variable stars of the Algol type.—Occultations of stars by the planets.—Occultations visible at Washington.—Phases and aspects of the Moon.—The great Sun spot.—New asteroids.—Rees' astronomical lectures.—Comet Notes.—Discovery of comet <i>b</i> 1892 (Swift).—Elements.—Re-discovery of Winnecke's periodic comet.—Search ephemeris for comet 1867 II and for comet Brooks, 1886 IV.—Brorsen's comet.—Elements and Ephemeris of comet <i>b</i> 1892 (Swift), by Mr. Sivaslian and Miss Harpham of Goodsell Observatory.....	337-344
News and Notes: United States Naval Observatory.—The Harvard College Observatory time service.—The new star in Auriga disappearing.—Astronomical and Physical Society of Toronto.—On the possibility of seeing meteors from comet 1882 I.—Distribution of the Moon's heat.—Strassmaier and Epping's researches on Babylonian astronomy.—Flammarion's popular lectures in Paris.—Note on the Lick Observatory lunar photographs.—Professor Hough's note on double stars.—Archenhold's Bibliography.—Wolsingham Observatory.—National Observatory in Athens.—Dr. Bæddicker's drawing of the Milky Way. Mexican meteorites by Professor Eastman.—Queries and brief answers.—Publisher's notices.....	345-352

MAY.

General Astronomy: The mountain station of Harvard College Observatory.	
W. H. Pickering.....	353
The Boyden station of Harvard College Observatory. W. H. Pickering...	357
Radiant energy as a probable cause of the solar corona, the comæ and tails of comets and the aurora borealis. Severinus J. Corrigan.....	362
George Bassett Clark, by J. A. Brashear. (Plate XV).....	367
History of the color of Sirius. T. J. J. See, Berlin.....	372
Observations and photographs of Swift's comet (March 6, 1892). E. E. Barnard.....	386
Astro-Physics: On the spectra and proper motions of stars. W. H. S. Monck,	389
The motion of Nova Aurigæ in the line of sight. H. C. Vogel.....	391
Some recent studies on the solar spectrum. A. L. Cortie.....	393
Solar photography at the Kenwood Astro-Physical Observatory. (Plates XVI, XVII). George E. Hale.....	407
Nova Aurigæ. Edward C. Pickering.....	417
Stars having peculiar spectra. M. Fleming.....	418
The true form of Algol's light curve. (Illustrated.) J. Plassmann.....	419
Distribution in latitude of solar phenomena, during second half of 1891. P. Tacchini.....	424
The distribution of the solar prominences of 1891. (Ill.) J. Evershed, Jr.,	426
Phenomena observed on the great spot-group of February, 1892. Julius Fényi. (Plate XVIII).....	430
Astro-Physical Notes: The new star in Auriga.—The relation between Sun-spots and auroras.—Mr. Veeder's letter concerning the same.—Magnetic disturbances and the great Sun-spot.—Stars of the first and second types of spectrum.—Photographic and photometric stellar magnitudes.—The grating in stellar spectrum photography.—Prominence observations with small telescopes.—Comparative photographic spectra of the high Sun and of the low Sun, by Mr. F. McClean.....	434-438
Current Celestial Phenomena: Planet notes and tables.—Occultations visible at Washington.—Minima of variable stars of the Algol type.—Mr. Marth's ephemeris of the satellites of Saturn.—Occultations of stars by planets.—Phases and aspects of the Moon.—Two new asteroids.—Comet notes: Designation of the comets of this year.—Search ephemeris for Comet Brooks, 1886 IV.—Orbit of Comet <i>a</i> 1892 (Swift) by Wendell.—Swift's Comet <i>a</i> 1892.—Ephemeris of the same.—Winnecke's comet.—Ephemeris of the same.—Denning's Comet <i>c</i> 1892, orbit and ephemeris.....	446
News and Notes: Portrait of Professor Adams.—History of the color of Sirius.—Professor W. H. Pickering's work in South America.—Report from Temple Observatory, Rugby, 1892.—Harvard College Observatory station at Arequipa, South America.—Partial eclipse of the Moon, May 11, 1892.—The new Jena glass.—Time of the Sun's passing the vernal equinox.—Lick Observatory lunar photographs.—The reduction of the Rutherford star plates.—Erratum.—Publisher's notes.....	446-448

JUNE.

General Astronomy: Colors exhibited by the planet Mars. William H. Pickering.....	449
The total solar eclipse, April 15-16, 1893. H. S. Pritchett.....	454
Explanation of the mystery of the Egyptian Phoenix. T. J. J. See, Berlin.....	457
Observations of Nova Aurigæ at Vassar College Observatory. M. W. Whitney.....	461
Preliminary address of the General Committee of the World's Congress Auxilliary on Mathematics and Astronomy. George W. Hough, chairman.....	462
New binary star β 208. S. W. Burnham.....	464
52 Herculis (β 627). S. W. Burnham.....	465
Orbit of β 612. Professor S. Glasenapp.....	466
Notes from the time service of Washburn Observatory. S. D. Townley.....	467
The earthquake for February 23, 1892. William H. Pickering.....	470
The German variation of latitude work. Harold Jacoby.....	471
Physical Observations of Mars by Dr. Terby. Translated from the French by Roger Sprague.....	478
The physical nature of shooting stars and aerolites. W. F. Denning, England.....	481
Astro-Physics: On electrical discharges through poor vacua and on coronoidal discharges. (Plate XIX and other illustrations.) M. I. Pupin.....	483
On the line spectra of the elements. C. Runge.....	496
On the large Sun-spot of 1892, February 5-18, and the associated magnetic disturbance.....	499
On a remarkable prominence. H. Deslandres.....	502
The new star in Auriga. Agnes M. Clerke.....	504
A study in the variation of the solar diameter. Orray Taft Sherman.....	513
The temperature of the Sun. H. LeChatelier.....	517
Solar observations during the first quarter of 1892. P. Tacchini.....	520
Astro-Physical Notes: M. Lecoq de Boisbaudran's observations on the electric spectra of gallium.—The aurora of April 25.—Solar halo and mock suns.—Wolsingham Observatory circular No. 32.—Kayser and Runge on the spectra of the elements.—Spectrum of comet α 1892.—Photography of the Ring Nebula.—A large new nebula in Auriga.—The portrait lens in stellar photography. Photography of colors.—Magnesium as a source of light.—Magnetic storm of February in Mauritius.—Periodicity common to Sun-spots and the Aurora Borealis.—Connection between Sun-spots and magnetic storms.—The great Sun-spot and its influence.—Absorption spectra of metallic films.—The visible spectrum of Nova Aurigæ.....	520-529
Current Celestial Phenomena: Planet notes and tables for July and August.—Occultations visible at Washington.—Mr. Marth's ephemeris of the satellites of Saturn.—Configuration and phenomena of Jupiter's satellites.—Minima of variable stars of the Algol type.—Occultations of stars by planets.—Brightness of asteroid No. 324.—Phases and aspects of the Moon.—Twenty-two asteroids discovered in 1891.—Comet Notes:—Orbit of comet α 1892 (Swift).—Ephemeris of the same.—Ephemeris of Winnecke's comet.—Search ephemeris for comet Brooks, 1886 IV.—Observation of Saturn.....	529-537
News and Notes: Total solar eclipse, April 15-16, 1893.—The Milky Way by Otto Bæddicker.—Aurora at Mt. Hamilton.—Aurora at Providence, R. I.—Occultation of Uranus, April 12.—Proceedings of Haverford College Observatory, 1891.—Annual report of the Observatory of Paris.—The opposition of Mars in 1892.—Book Notices.—Publishers' Notices.....	538-544

AUGUST.

General Astronomy: Colors exhibited by the planet Mars. William H. Pickering.....	545
The double star π^2 Ursæ Minoris (Σ 1989). S. W. Burnham.....	548
The proper motion of Σ 1603. S. W. Burnham.....	549
Note on the history of the color of Sirius. T. J. J. See.....	550
On a pretended early discovery of a satellite of Mars. Ralph Copeland.....	553
Photographic search for a planet beyond the orbit of Neptune. Isaac Roberts.....	554
Physical observations of Mars. Dr. Terby.....	555

The new enlarging photographic lens. (Plate No. XX.) S. W. Burnham.	558
The total solar eclipse. April 15-16, 1893. (Illustrated.) <i>Nature</i> , June 30, 1892.	562
Notes on new and old nebulae. Lewis Swift.	566
The nebular hypothesis. (Illustrated.) James E. Keeler.	567
Astro-Physics: On Nova Aurigæ. (Plates XXI and XXII.) William Huggins and Mrs. Huggins.	571
Pringsheim on Kirchhoff's law. (Illustrated.) Henry Crew.	581
Notes on the spectra of Sun-spots. A. L. Cortie.	587
On the new star in the constellation of Auriga. (Plate XXIII.) Ralph Copeland.	593
The ultra violet spectrum of the solar prominences. George E. Hale.	602
Photographs of solar phenomena obtained with the spectroheliograph at the Kenwood Astro-Physical Observatory. (Plates XXIV and XXV.) George E. Hale.	603
Nova Aurigæ. Walter Sidgreaves.	604
Distribution of solar phenomena in latitude in the first quarter of 1892. P. Tacchini.	608
On a prominence of extraordinary height observed May 5, 1892. Julius Fényi.	609
Photographs of the occultation of Mars by the Moon (July 11, 1892), made at the Kenwood Astro-Physical Observatory. (Plate XXVI.) George E. Hale.	610
A remarkable solar disturbance. George E. Hale.	611
Astro-Physical Notes: The spectra of Sun-spots and the chromosphere.—Observations of a solar prominence.—Sun-spots and magnetic storms.—S. W. Burnham returns to Chicago.—Dr. Henry Crew's election as Professor of Physics in Northwestern University.—Lewis Morris Ruthruff.—Errata.—Visibility of Venus.—F. P. Leavenworth.	613-618
Current Celestial Phenomena: Planet notes and tables for August and September.—Jupiter's satellites.—Approximate central times when the great red spot passes the center of Jupiter's disc.—Occultations visible at Washington.—Configuration of Jupiter's satellites at 10:30 p. m. central time.—Occultation of stars by planets.—Minima of variable stars of the Algol type.—Phases and aspects of the Moon—Aurora July 16, 1892.—Comet Notes:—Swift's comet still visible.—Elements of comet 1892 I (Swift March 6).—Ephemeris of comet a 1892.—Ephemeris of Winnecke's periodic comet 1892.—Denning's comet.—Search ephemeris for comet Tempel (1867 II).—Partial eclipse of the Sun Oct. 20, 1892.—Elements of the asteroids of 1891.—Occultation as seen at the Underwood Observatory.—Occultation of Mars.	619-627
News and Notes: Professor Asaph Hall, Jr., is appointed director of the Observatory at Ann Arbor, Michigan.—Mr. Burnham's resignation.—J. A. Brashear's return from an European trip.—Professor W. J. Hussey is elected assistant professor of astronomy at the Leland Stanford, Jr. University, California.—Changes in the staff at the Lick Observatory.—Rebuilding Dudley Observatory.—Civil administration at the Naval Observatory.—The star camera at the Sydney Observatory.—Professor A. Hall's double star observations.—Professor W. H. Pickering's note on the color of Mars.—Photographic chart of the sky.—Meteorology at Coimbra, Portugal.—P. Francois Denza's publication.—The photo-chronograph applied to the determination of latitude.—Brilliant aurora at Mt. Hamilton June 26.—Comparison of celestial photographs.—Visit to Kenwood Physical Observatory.—Color of Sirius in ancient times.—Chicago Academy of Sciences.—Astronomical Society of the Pacific.—Astronomical and Physical Society of Toronto.	628-638
Book Notices: High school algebra by W. J. Milne, published by the American Book Company, New York, Cincinnati and Chicago.—Plane and spherical trigonometry by E. Miller, Professor of mathematics and astronomy in the University of Kansas. Published by Messrs. Leach, Shewell and Sanborn.—A drill book in algebra by George William Jones, Ithaca, New York. Published by the author.—Determinants by G. A. Miller of Eureka college. Publishers D. Van Nostrand Co., New York City.	638-640

OCTOBER.

General Astronomy: On astronomical photography with commercial lenses.	
Wm. Harkness.....	641
The planet Saturn and its satellites. William H. Pickering.....	649
Some additional points relating to comets. George W. Coakley.....	652
The double star σ^2 224. S. W. Burnham.....	661
The double star σ 1216. S. W. Burnham.....	662
Note on the Mt. Hamilton observations of Mars. June-August, 1892.	
(Plate XXVIII and XXIX.) Edward S. Holden.....	663
Mars. (Plate XXX.) William H. Pickering.....	668
Observations of Mars at the Halsted Observatory, Princeton, N. J.	
(Plate XXXIII.) C. A. Young.....	675
Meager news from Mars. Lewis Swift.....	678
Observations of Mars at the Washburn Observatory. Geo. C. Comstock.	679
Preliminary remarks on the observations of Mars 1892, with the 12-inch	
and 36-inch refractors of the Lick Observatory. (Plates XXXIV and	
XXXV.) E. E. Barnard.....	680
Observations of Mars at Goodsell Observatory. (Plates XXXI and	
XXII.) H. C. Wilson.....	684
Recent observations of Jupiter, the great red spot and its changes. E. E.	
Barnard.....	686
Lewis Morris Rutherford. (Frontispiece.) John K. Rees.....	689
Discovery of comet Brooks. William R. Brooks.....	697
Astro-Physics: The spectrum of comet α 1892. (Plate XXXVI.) W. W.	
Campbell.....	698
On the spectra and proper motions of stars. W. H. S. Monck.....	700
The photo-electric cells. G. M. Minchin.....	702
On the spectrum of liquid oxygen. Professors Liveing and Dewar.....	705
Solar observations during the first quarter of 1892. P. Tacchini.....	710
Distribution in latitude of solar phenomena. P. Tacchini.....	711
New results on hydrogen, obtained by spectroscopic study of the Sun. H.	
Deslandres.....	712
Recent observations of Nova Aurigæ. (Plate XXXVII.) W. W. Camp-	
bell.....	715
Observations on thermal absorption in the solar atmosphere. Edwin B.	
Frost.....	720
Astro-Physical Notes: New outburst of Nova Aurigæ.—Exceptional solar	
disturbance.—Professor Schuster's address before the British Association.	
—A national physical laboratory.—Solar photography at Kenwood Ob-	
servatory.—Distribution of Sun-spots in solar latitude.—New observa-	
tories.....	737-741
Current Celestial Phenomena: Planet notes and tables for November.—Min-	
ima of variable stars.—Jupiter's satellites.—Ephemeris of the great red	
spot.—Occultations.—Occultation of Mars observed at Denver.—Partial	
eclipse of the Sun, Oct. 20, 1892.—New minor planet 1892 A (Wolf).—Comet	
d 1892 (Brooks).—Ephemeris.—Ephemeris of Winnecke's comet.—Ephem-	
eris of comet 1892 I (Swift).....	742-752
News and Notes: The planet Mars.—Mr Barnard's discovery of a fifth satel-	
lite to Jupiter.—Nova Aurigæ.—A new variable star in Aries.—Nova	
Aurigæ a nebula.—A new variable star.—Publisher's Notices.....	748-752

NOVEMBER.

General Astronomy: The probable origin of meteorites. George W. Coakley.	753
The motion of the solar system. J. G. Porter.....	764
Stars having peculiar spectra. M. Fleming.....	765
The nebular hypothesis [Continued]. J. E. Keeler.....	768
On the relative albedo of planets. W. H. S. Monck.....	776
The lunar atmosphere and the recent occultation of Jupiter. (Plate	
XXXVIII.) William H. Pickering.....	778
A large southern telescope. Edward C. Pickering.....	783
Groups of asteroids. Daniel Kirkwood.....	785
Astro Physics: The Yerkes' Observatory of the University of Chicago.	
George E. Hale.....	790
Spectroscopic investigations at the Physical Institution of the Royal	
Swedish Academy of Sciences. (Plate XXXIX.) B. Hasselberg.....	793

The spectrum of Nova Aurigæ in February and March 1892. (Plates XL and XLI). W. W. Campbell.....	799
Some results from a photographic study of the Sun. George E. Hale.....	811
The solar disturbances of July, 1892. John S. Townsend.....	815
The solar disturbances of July, 1892. Walter Sidgreaves.....	817
Recent observations of Nova Aurigæ. W. W. Campbell.....	820
The ultra-violet spectrum of the solar prominences, III. George E. Hale..	821
Astro-Physical Notes: Editorial board of ASTRO-PHYSICS.—Method for detecting and exhibiting Hertizian vibrations.—Line spectrum of hydrogen in the oxyhydrogen flame. Solar observations at Mt. Hamilton.—Central star of the Ring Nebula.—Schumann's researches on the extreme ultra-violet part of the spectrum. Drawings of Mars.—The cyclone theory of Sun spots.—Solar prominence photography.—Nova Aurigæ.—Telescopes for amateurs.—Photographing the ultra-violet rays.—Occultation of Mars, Sept. 3, 1892.....	822-831
Current Celestial Phenomena: Planet notes and tables for December.—Occultations visible at Washington.—Phases and aspects of the Moon.—Phenomena of Jupiter's satellites.—Ephemeris of the great red sp t.—Configuration of Jupiter's satellites.—Minima of variable stars of the Algol type.—Total eclipse of the Moon, Nov. 4, 1892.—New comet discovered by photography.—Five comets now visible.—New elements of comet <i>d</i> 1892 (Brooks).—Ephemeris of comet <i>d</i> 1892.—Ephemeris of comet <i>a</i> 1892 (Swift).—Ephemeris of Winnecke's comet.—New minor Planets.—The partial eclipse of the Sun, Oct. 20, at Northfield.—At Providence, R. I.—At Alta, Ia.—At Wilmington, N. C.—At Baltimore, Md.....	831-839
News and Notes: New director of the Paris Observatory.—Note from Professor Keeler.—Letter from Professor Young on the fifth satellite of Jupiter.—An aerolite in court.—The photo-electric effect of star light.—A curious old astronomical chart (Illustrated).—Astronomical and Physical Society of Toronto.—Chicago Academy of Sciences.—Book Notices.—Publishers' Notices.....	839-848

DECEMBER.

General Astronomy: Mars. Wm. H. Pickering.....	849
Silvering glass mirrors. A. A. Common.....	852
Request for observing night clouds. W. Foerster and O. Jesse. (Illus.)....	859
The total eclipse of the Sun, 1893. John King.....	863
On proper motion of Σ 1604. (Illustrated.) S. W. Burnham.....	870
A free escapement with a perfectly independent balance or pendulum. (Illustrated.) D. Appel.....	872
The proper motion of the stars. W. H. S. Monck.....	874
Robert Grant. <i>Nature</i> , Nov. 10, 1892.....	878
Astro-Physics: The motion of Nova Aurigæ. W. W. Campbell.....	881
Note on the revival of Nova Aurigæ. Walter Sidgreaves.....	882
On the application of interference methods to spectroscopic measurements. (Plates XLII, XLIII, XLIV, XLV.) A. A. Michelson.....	884
On the star in the constellation of Auriga. H. Seeliger.....	904
On the condition of the Sun's surface in June and July, 1892, as compared with the record of terrestrial magnetism. (Plate XLVI.) G. E. Hale.....	917
Astro-Physical Notes: The 40-inch telescope of the Yerkes' Observatory.—Unusual appearance in a Sun-spot.—Behavior of the arrowhead in the C line in a solar eclipse.—Do large telescopes pay?—A new combined visual and photographic objective.—The spectrum of Holmes' comet.—Professor Seeliger's explanation of Nova Aurigæ.—A small spectroscope by Mr. Brash-ear.—On the mass of the earth's atmosphere.—A new proof of a fundamental equation of the spectrometer.—On a simple method for obtaining the color curve of a lens.—Nova Aurigæ.—A translation of Scheiner's <i>Die Spectralanalyse der gestirne</i> .—Recent spectroscopic determinations.....	925-935
Current Celestial Phenomena: Planet notes and tables.—Configuration of Jupiter's satellites.—Phenomena of Jupiter's satellites.—Phases and aspects of the Moon.—Occultations visible at Washington.—Minima of variable stars of the Algol type.—Two new asteroids.—Comet Notes:—Three new comets.—Discovery of comet <i>f</i> 1892.—Elements of comet <i>f</i> 1892. Comet Holmes seen Nov. 3.—Discovery of Comet <i>g</i> 1892.—Comet <i>e</i> 1892. (Barnard Oct. 12).—Comet <i>d</i> 1892, (Brooks Aug. 28).—Elements and	

ephemeris by Hill.—Ephemeris of comet a 1892.—How to compute the relative brightness of a comet.—The shower of the Bielid meteors.—Meteor shower of Nov. 23, 1892.—Meteors of Nov. 23, 1893, by Professor W. J. Hussey.....	936-944
News and Notes: Mounting of the 40-inch telescope for Chicago University.—Aids for temporary star-search.—Cause of brightness of the limb of Mars.—Peculiar stellar spectra by Professor E. C. Pickering.—Occultation of Mars July 11, 1892, by Professor Hough. The fifth satellite of Jupiter observed by Professor Hough.—General index to volume XI.....	944-946

ILLUSTRATIONS.

Eruptions photographed July 9, 1891, at Chicago, Plate III, following.....	16
Prominence photographed Oct. 20, 1891, and distortion of calcium lines, Plate IV, preceding.....	17
Overlapping spectra, following.....	32
Photographic method for determining stellar places, following.....	48
Register of declination, horizontal and vertical forces.....	69
Paths of Venus and Saturn for 1892.....	81
Fig. I. Attractive force concave towards the center.....	98
Fig. II. Repulsive force convex towards the center.....	99
Paths of atoms of radiant energy.....	111-116
Light curve of the eclipse of Iapetus in shadows of globe, crape and bright rings of Saturn.....	120
Sun-spot group of Aug. 28 to Oct. 4.....	131-138
Star spectroscope of Lick Observatory, Plate V, following.....	144
Star spectroscope of Lick Observatory, Plate VI, preceding.....	145
Spectrum of Sirius showing principal iron lines.....	153
Cut of Saturn.....	164
Tidal theory of the forms of comets.....	177
Sketches of Jupiter, with the 16-inch equatorial, Goodsell Observatory, Plate VII, following.....	192
Objective prism at Harvard College Observatory, Plate VIII, following.....	200
Velocity of stars in line of sight, by spectroscope.....	209
Apparatus for hydrogen burning in oxygen.....	216
Spectrum of Nova Aurigæ photographed at Harvard College Observatory Feb. 5, 1892, Plate IX, following.....	228
Spectrum of Nova Aurigæ with measures.....	232
Motion of the great sun spot in February.....	248
Star map showing place of Nova Aurigæ.....	249
Simple mounting for large telescopes in eclipse field work.....	258-266
Professor John Couch Adams, Plate X, following.....	288
New spectroscope of the Halsted Observatory. Plate XI, following.....	296
Limit of the visibility of different rays of the spectrum.....	300-303
Spectrum of large Sun spot group of Feb., 1892, Plate XII, following.....	308
Spectroscopic observations of great sun spot of Feb., 1892, Plate XIII, following.....	312
Harvard College Observatory at Arequipa, South America, Plate XIV, Frontispiece No. 105.....	
George Bassett Clark, Plate XV, following.....	368
Spectroheliograph of the Kenwood Astro-Physical Observatory, Chicago, Plates XVI and XVII, following.....	408
True form of Alcol's light curve.....	421
Great spot group of February, 1892, Plate XVIII, following.....	432
Coronoidal electrical discharges, Plate XIX, preceding.....	483
Apparatus for study of electrical discharges through poor vacuum.....	484
Curve showing intensity of solar radiations.....	518
Pictures by ordinary rectilinear and with added negative lens, plate XX, preceding.....	561
Total solar eclipse, April 15, 16, 1893.....	563, 564
Nebula of Andromeda.....	570
Comparison of variable spectra, Plate XXI, preceding.....	573
Spectra of Nova Aurigæ, Plate XXII, following.....	576
Spectrum, intensity curve and magnitudes of Nova Aurigæ, Plate XXIII, facing.....	593
Spectrum of prominences and photograph of faculae and Sun-spots, Plate XXIV, following.....	602
Photographs of chromosphere and prominence, Plate XXV, preceding.....	603
Mars emerging from occultation July 11, 1892, Plate XXVI, facing.....	610
Levis Morris Rutherford, Plate XXVII, frontispiece No. 108.....	
Mars, August 14, 1892, by W. W. Campbell, Plate XXVIII, following.....	666
Mars, August 17, 1892, by W. H. Hussey, Plate XXIX, preceding.....	667
Mars, May and July, by W. H. Pickering, Plate XXX, following.....	672
Mars, July 26, by C. A. Young, Plate XXXIII, facing.....	677
Mars, August 19, by E. E. Barnard, Plate XXXIV, following.....	682
Mars, August 21, by E. E. Barnard, Plate XXXV, preceding.....	683
Mars, August 13, by H. C. Wilson, Plate XXXI, following.....	684
Mars, August 26, by H. C. Wilson, Plate XXXII, preceding.....	685
Spectra of comet a 1892 (Swift), Plate XXXVI, facing.....	698
Spectrum of Nova Aurigæ, Plate XXXVII, facing.....	717
New variable star in Aries.....	751
Photographs of Jupiter at the occultation of August 1, 1892, Plate XXXVIII, facing.....	780
Photographic spectrum of aluminium oxide, Plate XXXIX, facing.....	796
Visible spectrum of Nova Aurigæ, 1892, February 28, from observations at the Lick Observatory, by W. W. Campbell, Plate XL, following.....	800
Photographic spectrum of Nova Aurigæ, H γ region, 1892, February 9, Plate XLI, preceding.....	803
Old astronomical chart.....	845
Map of stations in Chili, total eclipse April 16, 1893.....	866
Proper motion of Sigma 1604.....	870
Free escapement with independent balance or pendulum.....	873
Plate XLII accompanying A. A. Michelson's article on the application of interference methods for spectroscopic measurements.....	886
Plate XLIII, the same, following.....	896
Plate XLIV, " " " ".....	896
Plate XLV, " " " ".....	896
Plate XLVI, " " " ".....	896
Plate XLVII, solar eruption photographed July 15, 1892, with the spectroheliograph at the Kenwood Observatory, following.....	920
The arrow-head in the C line in a solar eclipse.....	926
New proof of the fundamental equation of the spectrometer.....	932
Map of Neptune's position in Taurus.....	937
